

## Introduction of Multi-factor Authentication for the Student Web System

Through operations starting at 6:00 p.m. on March 1 (Wed.), Multi-factor Authentication will be implemented for the Student Web System to provide an extra layer of protection.

Once it has been implemented, to access the Student Web System from off-campus, you will be required to authenticate using an authentication code in addition to your user ID and password.

The authentication code must be authenticated using the "Google Authenticator" application, so please install it in your devices beforehand.

\*1 The application can be installed even after the implementation of the Multi-factor Authentication on March 1.

\*2 If you do not log in to the system using off-campus network, you do not need to take this action.

### 1. How to install Google Authenticator (Google Authentication System)

\*If you carry a smartphone or tablet, install Google Authenticator (Google Authentication System) on the device you carry.

Please download the application from the application store and install it beforehand.

iPhone : App Store

Android : Google Play

### 2. Authentication method after installation

To be announced at a later date.
